

I am a member of a club of shortwave listeners. I am concerned that if BPL is distributed widely -- e.g. include my neighborhood -- the radiated BPL frequencies will interfere with my ability to listen to International shortwave which is protected by a document signed by U.S. of A.

Tests performed so far seem to support this concern.

I expect the FCC to make sure that BPL uses a solution that has been thought all the way through.

I'm sure President Bush wants that to be the case, also.

Best regards,

Wayne
